### Abstract of JP5220345

PURPOSE:To remove mercuric chloride contained in exhaust gas discharged from e.g. a refuse incinerator by a wet process.

CONSTITUTION:In a method for removing mercury contained in exhaust gas by a wet process, sodium hydroxide is dissolved in washing liquid 11 held in a washing vessel 10 and treatment of acidic gas is performed. The aqueous solution 17 of sodium hypochlorite is added into the washing liquid 11 in accordance with COD and oxidation-reduction potential of the washing liquid 11. Thereby the reductive substance of mercury in the washing liquid 11 is oxidized. Exhaust gas is washed while preventing the reduction of mercury.
